

Installation and Setup

1. After purchasing the app on forceXchange you will be able to see two buttons “Install in Sandbox” and “Install in Production”. You can choose either of these two options. If you want to test this app first before using it in production environment, install it in Sandbox.
2. Go through the following steps to install the component in your Salesforce Org.
3. Click on either “Install in Sandbox” button or “Install in Production” button.
4. You may be asked to login with your Salesforce org credentials.
5. Select which type of users you want to install it for and click on the **Install** button to install the app.

Install Lightning Audit Trail

By Sushil Kumar

What if existing component names conflict with ones in this package?

Do not install.

Rename conflicting components in package.

Install for Admins Only

- Audit Trail**

8. Now you will redirect to the Audit Trail page as below.

Lightning Audit Trail:

The Setup **Audit Trail** feature to closely track changes made to your organization by the Users. It records all modifications concerning the development (like Apex Classes, VF Pages, Triggers, Lightning Components, etc.) of your Salesforce organization. Using this you can filter records via Date range like Today, Yesterday, This Month, This Year, and also with particular date range as above screenshot. You can export all records as the report by the clicking on the **Export in CVS** button and you will get like below:
